**SYSCON-PlantStar and Priamus System Technologies announce a Joint Venture for the Integration of Their Systems and Products.**

South Bend, Indiana and Brunswick, Ohio – April 6, 2009

SYSCON-PlantStar and Priamus System Technologies have announced a joint venture between their two companies that enables the direct interface of the PlantStar Production and Process Monitoring System Solutions with the state-of-the-art Cavity Pressure and Temperature Control System from Priamus. The intent of the technology merger is designed to take the monitoring of the injection molding process beyond the traditional machine molding parameters and include the key parameters of cavity pressure and temperature and incorporate them into a system that provides historical and Real Time SPC data for improvement in part quality.

“PlantStar has been providing our customers with real time manufacturing information systems including process monitoring reporting for a very long time. Now with the partnership with Priamus we can take this real time data acquisition and tracking to a new level,” reports Gary Benedix Vice President PlantStar. PlantStar responded to customer requests for shot by shot evaluation and graphing of what is taking place within the mold with the direct interface to Priamus. PlantStar reports that data taken directly from the Priamus monitoring and control systems fit seamlessly into its complete production and process management systems. PlantStar reports that it will greatly compliment its cycle by cycle tracking and trace-ability program for use by Medical molders and others interested in product trace-ability.

Priamus offers a family of products that address mold cavity monitoring and control. Their product offerings include cavity pressure monitoring coupled with temperature control at the mold level. Supporting their control systems Priamus offers a complete line of cavity pressure and cavity temperature sensors. “ Our control systems solutions have been tested and are well proven technology that guarantees a high quality standard for the injection molding process. We have been able to reduce costs and improve part quality for our customers; that translates into a quick return on their investment. Adding PlantStar as a partner only broadens the scope and use of our systems within both of our customer bases,” stated Susan Montgomery President Priamus USA.
